

Numara Compliance Manager

Maintain Regulatory Compliance Standards

Non-compliant assets can create costly problems, yet enforcing compliance policies and assessing assets is difficult and time-consuming. Complicating matters, regulatory standards are often

ambiguous and are frequently interpreted differently from one auditor to another. As a result compliance becomes a moving target. Numara® Compliance Manager makes it easy to prevent expensive non-compliance issues before they occur. The easy-to-use, automated solution allows you to define policies, continuously monitor your environment against those policies, and provide auditors with records of your compliance levels. Out of the box, Numara Compliance Manager includes templates for ISO 27001, ISO 27002, National Institute of Standards and Technology (NIST) and Microsoft® hardening guides, allowing you to quickly set and

assess your compliance levels. In addition to providing pre-built templates, Numara Compliance Manager allows you to define custom policies specific to your industry or company standards.

Automatically Detect Non-Compliant Devices

Numara Compliance Manager leverages the power of Numara Inventory Manager to perform non-intrusive agentless scans of your network to proactively detect potential compliance issues. Dynamic grouping options allow you to quickly identify, group, and immediately remediate those devices that do not adhere to defined compliance policies. In addition, Numara Compliance Manager provides comprehensive reports and dashboards that enable you to monitor compliance levels every step of the way.

Many Challenges. One Solution.

Numara Compliance Manager is one part of a fully integrated line of IT asset management solutions that make up the Numara Asset Management Platform (NAMP). Each NAMP product automates and streamlines a specific IT asset management challenge to help you reduce costs and improve service levels. Built from the ground up as a modular, yet integrated system, the NAMP product line provides a single, unified solution to simplify a diverse set of complex asset management needs.

All NAMP products run on a centrally managed framework and leverage one console, one database, one set of operational rules, one reporting engine, and one multi-functional agent. As a result of this integrated approach, you can easily snap in individual asset management products to fit changing needs without the overhead and expense of implementing a whole new solution, which means faster ROI and a lower total cost of ownership.

Scalable Architecture, Easy to Manage

Numara Compliance Manager and all NAMP products employ a highly flexible, multi-tier architecture that can serve any size organization, small or large, and easily scale to manage thousands of nodes in large geographically distributed organizations.

Built-in configuration tools and a graphical administrative console allow you to dynamically adapt to a changing environment by expanding or reconfiguring your deployment in minutes without programming or scripting.

Supported Platforms

[See Numara Asset Management Technical Specifications Brochure](#)

Highlights

- Define policies based on industry regulations and standards
- Leverage standards with out-of-the-box policies
- Perform non-intrusive agentless scans
- Automatically identify non-compliant devices for immediate remediation
- Leverage your Numara Inventory Manager investment
